

OUR COMMITMENT TO ANIMAL WELFARE

Mulesing is routine, very painful surgical procedure for the majority of sheep especially in Australia where most of wool fibre come from. It is an unethical method applied by some sheep farmers preventing animals from infections related to insects. Mulesing means cutting skin from around a lamb's breech to create an area of bare, stretched skin, which is less likely to attract infections-causing blowflies. Research shows the pain of mulesing is similar to that of castration, but it lasts up to 48 hours.

No animal should be forced to go through such pain and stress.

There are however different ways to keep sheeps safe from these insects. Despite higher costs we choose to use 100% mulesing-free merino wool.

+ TECHNOLOGY

Merino Wool – a natural microfiber from top class merino wool, protecting against chilling and overheating of the body. It is characterized by great moisture absorption parameters (up to 33% of its volume) and breathability.

NILIT® INNERGY – modified polyamide microfiber with the addition of a natural mineral that converts the thermal energy of the human body into far infrared radiation.

NILIT ® **Breeze** – modified polyamide microfiber with cooling properties and efficient ventilation parameters. The yarn is soft and elastic, it protects the skin against UV rays.

NILIT HEAT – is a unique yarn on the basis of coffee charcoal from husks of coffee beans that has natural thermal-insulating properties, gathers in its structure the emitted heat and keeps it even in low temperatures.

NILIT HEAT yarn is environment-friendly – because in the production coffee charcoal is used and obtained from the husks of coffee beans.

3D PRO Technology – designed to evaporate sweat quickly and keep cool. Lightweight, dual-layer, breathable fabric enhances air circulation to cool down. Available in tank top, short sleeve and long sleeve, running shorts, running tights and bike shorts. Wear in hot weather conditions, provides UPF 50 protection and keeps you cool and dry. Wear as a snug fit close to your skin.

The Double Heating Micro Fleece Technology -

System by Brubeck is innovative technology, consisting of selective, mechanical modification of the fabric surface. The result is a soft and delicate weave that is pleasant to the touch. Double Heating technology doubles thermal insulation properties and comfort.

BTP covering system – a technology of braiding polypropylene fibres around spandex. This knitting technique assures durability and fabric retention of the product.

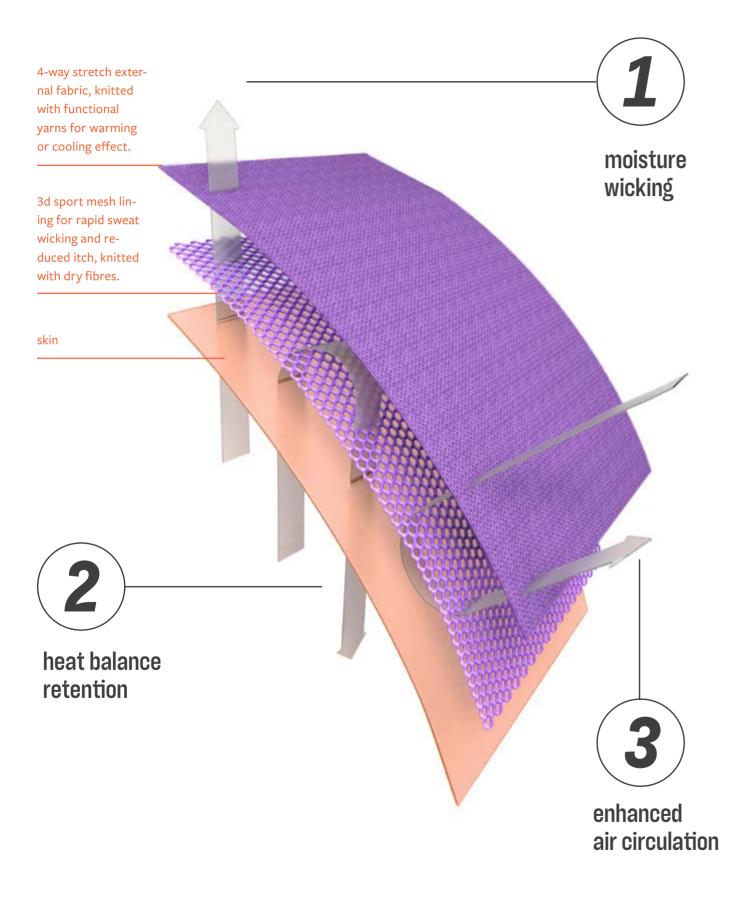

La Fonte – Made from ultra-thin high-density opencell foam, shock absorbing La Fonte chamois will cushion any bump on your way. Two models (for men and women) are adjusted to gender-specific anatomical features and differences in body shape. La Fonte chamois padding guarantees effective moisture transfer and dries quickly. It prevents irritation and chafing, and also has antimicrobial properties. BRUBECK offers chamois models both for men (Titan) and for women (Stark).

BRUBECKAirJet – Refined yarn made from air-spun elastane and polyamide microfibers is exceptionally smooth and highly resistant to abrasion. As a result, the size remains unchanged and the product is highly durable despite many years of use and repeated washing.

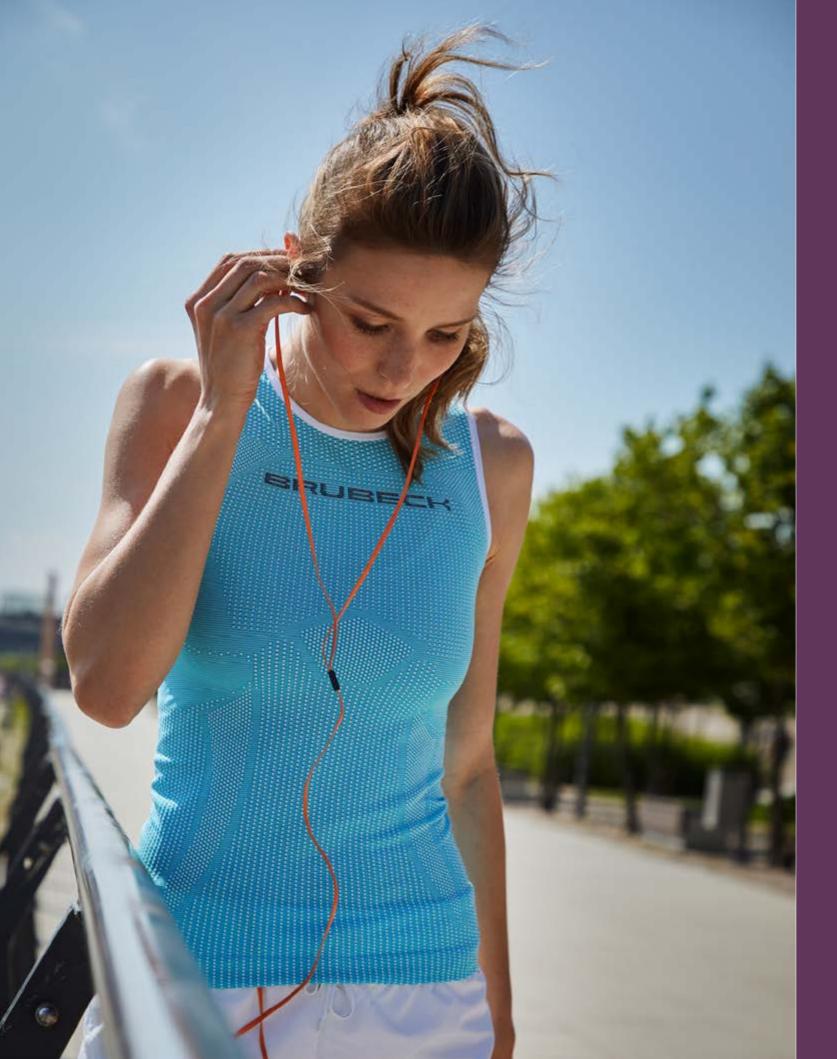

UPF 50+ – UPF 50 protection blocks out 98% of UV rays.

GENERAL FEATURES

- Atheltic fit reduced muscle vibrations
- Seamless body mapping
- 3D evaporative sport mesh lining
- Odour control
- Double layer
- Soft touch fibres

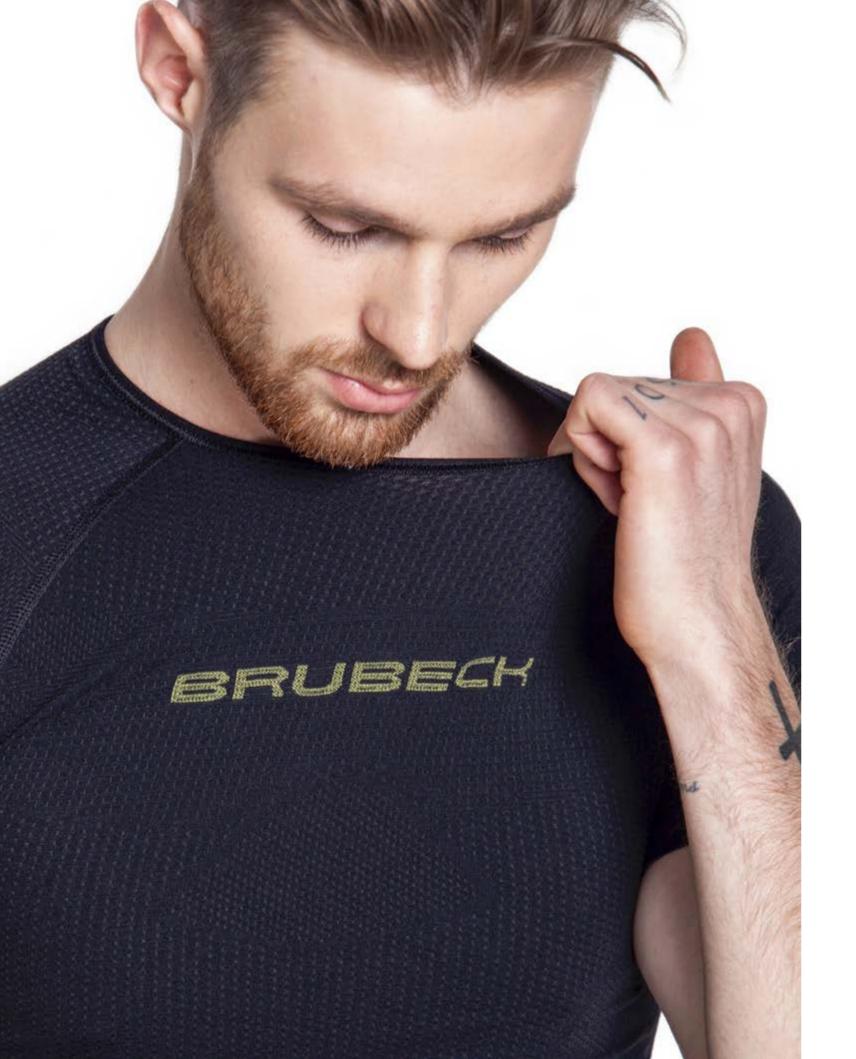

3D SUPER FABRICS

Warms up

- + +1.14°C to body temperature*
- + +9.4% to blood circulation speed*
- + Reflects back body heat (FIR)
- + Natural coffee carbon insulation
- + Moisture & odour control

Cools down

BIKE

Cycling shorts with chamois padding are made of seamless knitwear which allows the skin to breath. The inner layer immediately wicks moisture away from the skin, so perspiration will not bother you even during intensive effort. The ultra thin chamois made of high-density open-cell foam will cushion any bump. 3D zones situated on thighs form air circulation channels in the areas of excessive perspiration. Shorts fit the body perfectly and the effect of compression can be felt. The shorts have a 9" inseam with non-binding cuffs and a silicone element to keep them in place while cycling. Antiallergenic and bacteriostatic features prevent unpleasant odours.

This product is highly durable. It is recommended for long and demanding rides.

ACTIVE WOOL FABRICS - one step ahead

The finest merino wool is just not enough.

Sheeps don't sweat - people do. Naturally, pure wool cannot handle moisture, it soaks it becoming heavy and vulnerable to low temperatures.

Moisture management makes a difference.

We have crafted the active wool fabric, which has dry and evaporative 3D mesh lining. It wicks sweat away and speeds up evaporating process by enhancing air circulation through the fabric layers.

ACTIVE WOOL

ACTIVE WOOL is a mid-weight universal product for changeable weather. It has been designed for every season. It's double-layer, seamless construction guarantees exceptional thermoregulation properties to prevent excessive cooling, overheating and over-sweating. Inner layer is made of hydrophobic microfibres which stay always dry and fresh

RANGER

The RANGER line of products is designed for people working in difficult forest conditions and for hunters, where moisture and changing temperature are commonplace - nature can be unpredictable, and conditions can change vary extremely even several timesa day. An additional challange is the frequent variation in activity intensity, which is typical of hunting. The underwear dedicated for this group has to prove itself both during intense effort and during static activities and reduce the risk of coldness or body overheating.

- + No itch 17 microns super fine merino wool
- + Quick dry wool
- + Seamless body mapping
- + 3D evaporative sport mesh lining
- + Commitment to animal welfare (100% mulesing-free wool fiber)
- + Stay cool & dry

PROTECT

PROTECT clothing has been designed in seamless technology. Two-layered, breathable knitted fabric of medium thickness. Internal layer drains the moisture outside, ensuring comfort even during intense effort. External layer performs thermal-insulating function, protects against cold air passing through to the inside and against natural loss of heat.

FR PROTECT

Certified flame-retardant and antistatic underwear from the PROTECT line has been created for people working in specific, tough and unfavourable conditions. It guarantees protection and comfort du ring physical work, regardless of the level of exertion. Made in seamless technology from a two-layer breathable weave, it provides effective protection aga inst abrasions and adverse external factors. It adapts perfectly to the body, guaranteeing freedom of movement, and the two-layered design and mesh structure (in parts where increased sweating occurs) allow for the quick transport of moisture away from the body, which ensures high thermal comfort. PROTECT underwear is very durable and resistant to abrasions and bobbling. Taking into account health and safety measures, it is recommended for workers in various industries where high temperatures and electrostatic discharges occur.

EN ISO 11612:2015 Clothing to protect against heat and flame. This type of protective clothing is to provide protection where there is a requirement for limited flame spread properties, and where the user may be exposed to convective or radiant heat. The standard specifies the following performance levels:

Code Letter A Limited flame spread (A1 surface ignition/ A2 edge ignition)

Code Letter B Convective heat (level B1 lowest, level B3 highest)

Code Letter C Radiant heat (level C1 lowest, level C4 highest)

EN 1149-5:2018 Electrostatic properties of clothing (EN 1149-3:2004 Measurement of charge decay)
This type of protective clothing is designed to be electrostatically dissipative to avoid incendiary discharges.
